

Simple, Quick and Cost-effective Safety Management

Work Safety Interactive is a cloud-based workplace health and safety system. It is a **Simple, Quick and Cost-effective** means to workplace health and safety compliance.

Simplicity right from the start because there's no need to install any software as WSI is in the cloud and accessible from any device: PC, Mac, tablet and smartphone devices.

It's quick because WSI sends you emails explaining what to do. You login for an hour per month to maintain compliance.

Cost-effective: The list price for WSI before volume discount is only \$137.50 per month.

Why Work Safety Interactive?

National WHS laws (and the legislation in VIC and WA) require every PCBU/Organisation to put in place safe systems of work and have proof of regular compliance activities – finding a simple but comprehensive system to do this is the challenge.

WSI is a cloud-based workplace health and safety system which serves as a gateway to WHS simplicity.

How does Work Safety Interactive (WSI) Work?

Regular compliance tasks are sent to workplaces via email. The email includes a set of clear instructions to complete the task and supporting documentation is attached when required. The workplace completes the task and records the results in an online form. An audit trail of all activity is automatically created and available online at all times.

The need for compliance is on-going. However, once the system is established in an organisation, compliance tasks can be completed in as little as one hour per month, per location.

Multi-site

We can link each place of business to a central location, either national or state, for no extra charge so that compliance for the entire group can be monitored and maintained.

WSI System Features

- Setup is easy — cloud based and intuitive with no software to install, runs on all smart devices
- Saves head office resources — we do the setup then locations self-manage their own OHS with the system
- Cost effective — a low cost monthly access fee per location, discounted for a high volume of locations
- Simple to use — email updates tell the locations what to do — they login to the system, use the online form as required to make records (inspections, inductions, etc.), then save
- Follow up actions — are automatically recorded as tasks and a reminder is sent via email on the due date
- Audit trails — a history of compliance activities is created automatically
- Tracking performance — is easy via our 'Risk Rating' function and 'WHSIM History' snapshot view
- Free Template Policies and Procedures — with instructions for easy adaptation to your workplace
- Online forms: Inspections, Audits, Inductions, Hazardous Substances, Plant Registers, Training Plans...
- Telephone and email support — WSI Systems Administrators are on call to assist if you need it
- Built to Australian/New Zealand Standard 4801

Our Value Proposition

The WSI system provides its clients with a much simpler, more efficient way of managing workplace health and safety so they can get back to what they are in business to do – business.
